eH e-health

NEHTA's purpose: establishing the foundations for e-health

Lead the uptake of e-health systems of national significance; and coordinate the progression and accelerate the adoption of e-health by delivering urgently needed integration infrastructure and standards for health information.

e-health

Accurate identification is critical

E-health is about the right information at the right place, at the right time for the right person.

National connectivity leading to personally controlled electronic health records

e-health

2007 Initial release of eProcurement Specifications

eProcurement

Sept 2010 – Release of first NEHTA compliant MIG developed by WA Health in conjunction with NEHTA

where the service was provided

HPI-O

Healthcare Provider Identifier-Organisation

Initial foundations

St Vincent's Hospital Melbourne goes live with ICD-10 terminology – sending electronic prescriptions and discharge summaries

National Product Catalogue launched March 2006

Australian pharmaceutical products now in electronic catalogue

e-health

Plans for e-health adoption : When will it happen?

- Implementation will be a staged approach and there will be lessons from early implementation sites
- Medical software vendors will update their software
- The community will be educated and engaged about e-health
- Of course some implementation has occurred
 - the **National Product Catalogue** and **eProcurement** Solution are already operational with key stakeholders, vendors, suppliers and buyers

Thank you
