

GS1 HEALTHCARE ENDORSED BY 60 STAKEHOLDERS

The Healthcare stakeholders expressed their strong support in the adoption of GS1 as the global standard best suited for their industry

Implementing global standards across the entire healthcare supply chain could save 22,000-43,000 lives and avert 0.7 to 1.4 million patient disabilities, according to the McKinsey report, called "Strength in unity: The promise of global standards in Healthcare".

The report also found that rolling out a single, global standards-based system will:

- Keep tens of billions of dollars in counterfeit drugs out of the legitimate supply chain.
- Enable substantial safety benefits that would reduce Healthcare costs by \$40-100 billion.
- Cost significantly less than two or more systems.
